

Indigenous Heritage Sites

Backing up the primary knowledge of the Nyungar themselves, archaeologists have found semi-permanent campsites near North Lake, Bibra Lake and along the Cockburn Coast. Artefacts and rock engravings found in this area also reflect use of the land. Chert stone artefacts indicate continual use for at least 2,000 years.¹

The Department of Indigenous Affairs holds the records of these sites.

Summary of recorded Aboriginal Heritage sites for the Cockburn coast area²

SITE NAME			
Clontarf Hill			
Site Type Archaeo./Ethno Site Id. /Co-ords

(Camp, Hunting			
Place, Natural			
Feature)			
Description			
Clontarf Hill, previously known as Hamilton Hill, is bound by Healy Road to the south Clontarf Road to the north. The attributes of the site are given as ceremonial, mytho an artefact site, a hunting place and a natural feature. It sits currently on the Interim Register of the DIA and the site file has 'Open' access member of the Independent Environmental Nyungars, who grew up in the Fremantl reports he went with his father as a young child to Clontarf Hill to catch rabbits, and these occasions he saw a group of "full blooded" Aboriginal people camped on the H 2000:1). Site 18332 Clontarf Hill, a limestone and sand hillock, is possibly the only remaining point in the southern part of Fremantle. The view from Clontarf Hill takes in the Indi Ocean and offshore islands.

cover of sand plain flora.

A survey by Clune & Raaff in 1997 attempted but was unable to relocate the Cockburn Lighthouse archaeological site, 'although an extensive investigation was made in the reported location' (1997: ii). Their report does, however, emphasise that 'the site possibly continues to exist', and recommends that it be taken into account when assessing and conducting any development in the vicinity.

Mythological

Ethno

20866 / Coordinates: 384750mE, 6443650mN, GDA94, ±10m, Zone 50 (Reliable)

Description

The mythological significance of the Lake Coogee site (ID.20866) encompasses all of Lake Coogee itself.

The mythological creation of Lake Coogee is mentioned in relation to a site called 'JBE#1' recorded by McDonald, Hales and Associates in mid-1997 during a survey of the Jervoise Bay area. According to an Aboriginal consultant for that survey, the myth concerns a sparrow and a hawk that flew to the round hole in the earth where the moon rested during the day. This hole is located in the vicinity of North Lake. The two birds stole fire from the moon in the form of a firestick.

They flew along the limestone ridge near the ocean. The bush caught fire. The moon called his uncle, the ocean, to help. The ocean rose and extinguished the fire. Nyungars were drowned and the lakes in the area were formed, including Lake Coogee (McDonald, Hales and Associates 1997:28-30).

Artefactual	Archaeo.	15838 & 15839 /
		Coordinates: 384116mE, 6444399mN, Zone
		50 (Reliable)

Description

The Lake Coogee 2 site (ID 15839) was first recorded in 1997 during an archaeological survey by G. Clune and P. Raaff (on behalf of McDonald, Hales &

Associates, commissioned by Halpern Glick Maunsell) of the areas of land and sea within the Jervoise Bay Infrastructure Planning Study Precinct which were being proposed for development. The 1997 survey located two new Aboriginal archaeological sites 'situated on

the southwest and northwest side, respectively, of Lake Coogee': Lake Coogee 1 (ID 15838) and Lake Coogee 2 (ID 15839).

Lake Coogee 1 was found on the western side of the Cockburn Road realignment, which was, then under proposal. The site was located on a firebreak, and the material was noted eroding out of windrows formed to the side during construction of the track. The material of Lake Coogee 1 scatter consists of four quartz artefacts, 3 within 1-2m of each other, and the fourth some 20m to the north. The site was reported to be highly disturbed, 'but the large size of the artefacts suggests that smaller material may be located nearby beneath the surface' (1997: i).

Lake Coogee 2 was found in the centre of the then-proposed Cockburn Road realignment, the coordinates originally reported as 384561E, 6442510N (Clune & Raaff 1997: i). Their report states:

The lighthouse adjacent to Cockburn Road lies on a bearing of 282.5° north-west of the site. The site consists of approximately 103 quartz artefacts, and lies just beyond an existing gravel road and adjacent to a derelict fence line. The scatter has suffered disturbance from rabbit and human activity. (Clune & Raaff 1997: i-ii)

The Lake Coogee 2 site was ascribed by Clune and Raaff a higher degree of significance than that for Lake Coogee 1,

...as the former site is one of a small handful of moderate-sized sites...located in the Karrakatta Sands of the Spearwood dune system. The site is therefore rarer than LC-1 and appears to have undergone less disturbance. (Clune & Raaff 1997: ii)

Aboriginal community representatives, who were consulted in relation to this survey in 1997, regarding the significance of the archaeological material, expressed the desire to have it preserved if at all possible, and further requested that the area be monitored during construction due to what the report confirms to be the potential for there to be sub-surface material (especially burials).

The Lake Coogee 2 site lies outside the present Cockburn coast PDA, approximately 3km to the south. However, the close proximity of this site to the Cockburn Lighthouse site (ID 121) (albeit also outside the PDA boundaries) 'could indicate that the sandy stretch situated in the lee of the large limestone ridge to the east was a favoured camping area at least in the recent past' (Clune & Raaff 1997:13), giving further weight to reports of the significance of the surrounding area, including the Cockburn.

SITE NAME		
Robb Jetty Camp		
Site Type	Archaeo./Ethno	Site Id. /Co-ords
Man-Made Structure	Both	3707 / Coordinates: 382501mE, 6449352mN,
(Camp)		Zone 50 (Reliable)
Description		

Description

Site 3707 (Rob Jetty Camp) was first reported by O'Connor, Bodney and Little (1985) as a camping area located in the sandhills to the south of South Beach, in the vicinity of Catherine Point where camps were situated between the Bradford Kendall Pty Ltd Iron Foundry and Robb Jetty. According to O'Connor et al. (1985) early records indicate that the area was used as a camp area and was still in use by Aboriginal people from outside the metropolitan area at the time of recording. Like other long established fringe camps, O'Connor et al. considered the area likely to have been a traditional camping area. The site is on the Permanent Register and the file has 'Open' access. The Register indicates that the site is currently mapped as being approximately 1.2 km long, its width no greater

than 100m.

O'Connor et al (1985) note that the area is known to have been used for Aboriginal camping from about 1910, and that, "although Perth Metropolitan Aboriginal people no longer camp here, it was noticed that Aboriginal visitors from the Kalgoorlie region were living among the sandhills."

Though the sands driven by winter winds cover most evidence of human occupation, making individual camps hard to distinguish, in the deeper inter dunal swales, campfire ashes,

domestic refuse and the remnants of temporary shelters have been observed (O'Connor et al. 1985: 83-85). The site is also listed as containing a man-made structure and this is almost certainly due to O'Connor et al. reporting of the presence of remnants of temporary shelters. McDonald conducted archival research on behalf of Ethnosciences in 2003, which found that Makin (170) had identified an Aboriginal campsite adjacent to "The Smelters" to the south of Fremantle. However, the report goes on to say that the available evidence suggests that the Robb Jetty Camp and Makin's "The Smelters" camp are in fact one and the same.

According to O'Connor, Bodney & Little (1985) (DIA report ID 102670), the Robb Jetty Camp site (ID 3707) has been used as a campsite since approximately 1910. In the 2003 study by E. McDonald for the proposed South Beach Village development (see DIA Report ID 20805, summary below), discussions with the project's proponents revealed that Robb Jetty Camp was located to the south of the ANI Bradken Foundry land (Lot 1815 Island Street) and they could not recall anybody camping within the boundaries of the foundry property.

AIC also conducted a survey in 2003, involving consultation with representatives from the Combined Metropolitan Working Group (CMWG) NTCs, in which Site 3707 (which will be impacted by the present proposed re-development plans for the Cockburn coast) was identified by the Aboriginal informants as extending from the mouth of the Swan River to

Warnbro as the area is part of the well-used coastal 'pad' or route and had previously been used for camping and hunting.

SITE NAME		
Woodman Point		
Site Type	Archaeo./Ethno	Site Id. /Co-ords
Mythological	Ethno	15841 / Coordinates: 382346mE, 6444228mN, Zone 50 (Reliable)

Description

Woodman Point (site ID. 15841) is an ethnographic site recorded, along with theCockburn Road site (ID. 15840), in 1997 by McDonald, Hales & Associates, during a survey under the Aboriginal Heritage Act (1972). The Woodman Point site is registered as Mythological and described as being of ethnographic importance. The McDonald, Hales & Associates report which mentions the account given for recording and registering the site also mentions another version previously recounted in work by Bates (1985) and Wilson (1972) and notes the thematic similarity. It was stressed that no development be allowed to impinge on the site.

The possibility of encountering skeletal material was of concern to the Nyungar people consulted, as the dune areas may have been used for burials.

The above research demonstrates the strong links the Nyungar had in the past with the Cockburn coast area. Predominately, these connections are through two focuses, the first being Boodjar utilised as "as part of a particular 'chain' or route of favoured camping grounds, linked by wetlands and other water sources throughout the Perth Metropolitan area" and secondly, through mythological (or Dreaming) significance³.

These sites are indicative of the history of occupation of Boodjar, and the movement across the Cockburn coast area of the Nyungar people over time, in accordance with traditional activities and traditional prior to and throughout the disruptions of colonial settlement⁴.
